

OPTICAL DISK REPRODUCING DEVICE

Abstract

An optical disk reproducing device includes an external optical disk drive and a detachable module. The external optical disk drive can reproduce data from the optical disk, and the detachable module is equipped with audio output or video output. The external optical disk drive is equipped with a connector and the detachable module is equipped with a corresponding connector. The detachable module is connected with an audio or video output device via the audio or video output connector respectively. After data is processed in the external disk drive, it is easily sent to the audio or video output device. All a user has to do is attach the external optical disk drive to the detachable module, and then the optical disk reproducing device begins to reproduce or play data from the optical disk. Thus, it is very convenient for the user to enjoy the music or video playback.
